

An illustration at the top of the page shows several lead fishing sinkers of various shapes (teardrop, oval, and one with a hook) floating in the air. To the right, a crocodile is depicted in profile, looking up with a question mark on its snout, appearing confused or concerned. The sinkers and crocodile are drawn in a simple, hand-drawn style with grey outlines.

SAY

WHAAAT?!

Lead fishing sinkers discarded in waterbodies can poison crocodiles, waterbirds & fish that swallow them. Crocs in Lake St Lucia were found to have blood lead levels 200 times higher than what is considered safe!

YOU can help by using lead-free alternatives and by removing discarded lead from the environment and recycling it safely.
